

Model Lung Directions

1. Cut out the lungs, lips, and nose.
2. Tape two straws together with the flexible end of the straws pointing down.
3. Tape a plastic bag to the flexible end of each straw. Make sure the bags are completely sealed with tape so no air escapes!
4. Create "tape loops". Use the tape loops to secure the nose, lips, and lungs to the straws.
5. Blow into the top of the lungs and watch the "lungs" expand to inhale and exhale.
